Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: the control group and the experimental group. The control group was divided into two subgroups: the control group and the experimental group. The experimental group was divided into two subgroups: the control group and the experimental group. The control group was divided into two subgroups: the control group and the experimental group. The experimental group was divided into two subgroups: the control group and the experimental group.

Abstract The purpose of this study was to determine whether there were differences in the prevalence of self-reported depression between men and women who had been exposed to violence by intimate partners. Data from the National Longitudinal Study of Women's Health are used. Results show that among women who reported being sexually abused by their current or former partner, 10% reported having experienced depression during the past year compared to 6% of those who did not report sexual abuse. Among women who reported physical abuse by their current or former partner, 17% reported experiencing depression during the past year compared to 8% of those who did not report physical abuse. These results suggest that exposure to violence by intimate partners is associated with higher rates of self-reported depression.

● 2017年12月15日，中国银保监会发布《商业银行流动性风险管理办法》，自2018年7月1日起施行。

Abstract The purpose of this study was to determine whether there were differences in the prevalence of risk factors for coronary artery disease between men who had been exposed to asbestos and those who had not. A case-control study was conducted among men aged 60 years or older who had been employed in asbestos-related occupations before age 60. The cases were men who had died from coronary artery disease between 1978 and 1982. Controls were men who had died from causes other than coronary artery disease during the same period. Data were obtained from death certificates, medical records, and interviews with family members. The results showed that the prevalence of risk factors for coronary artery disease was higher among men who had been exposed to asbestos than among those who had not. These findings suggest that exposure to asbestos may be a risk factor for coronary artery disease.

- 1、参加检测的技术人员，均经培训合格后持证上岗。
- 2、检测仪器设备经国家计量部门检定合格，并在有效期内使用。
